

Covid-19 Vaccine

The Virus - carries all the information to make your cells sick

Membrane - holds the virus

Proteins - the key used to get into our good cells

The vaccine has replicated (copied) the protein ONLY (so it contains NO VIRUS) and this is what is injected into your body so that your immune system makes antibodies to fight the Covid-19 protein.

Can you use playdough to help the immune system create antibodies for these virus proteins?
